RE: DIN Rail Enclosures – Ideal for Omni-Bus Lighting Controls

Leviton is proud to announce the **NEW** DIN Rail Enclosure line, with agency-listed cabinets engineered to accept any equipment installed to ANSI-standard DIN rail. This design allows for highly flexible installations which can be custom-tailored to your specific application without the need for expensive custom cabinetry.

DIN Rail Enclosures consist of a back cabinet with DIN rails and wiring space, a dead front that hides the wiring, and a locking ventilated cover. The user can see the status of all installed equipment and operating test/bypass switches without Personal Protective Equipment (PPE) for safety and ease of installation. Enclosures can be provided either as empty for field installation of equipment or factory pre-configured with Leviton Omni-Bus™ or VerifEye™ pre-installed modules and/or wiring.

Key Features

- Available in small, medium and large formats
- Can accommodate Leviton Omni-Bus™ modules or any other DIN rail mount load control, or other 3rd party ANSI standard control equipment
- Optionally pre-configured at the factory. Contact Leviton Quotes (EMCAQuotes@leviton.com) for ordering information.
- CE listed; ETL and UL listed to UL and CSA Standards as an Industrial Controls Equipment Enclosure
- No expensive custom cabinetry required

Support Materials

1. [Product Bulletin](#) - Covers features, benefits, and specifications.
2. [Spec Sheets](#) – Have been created for 3 DIN Rail Enclosures and updated for all Omni-Bus devices.
3. [Brochure](#) – Updated to assist with sales process.
